

Vincent Ilinicz

v.ilinicz@gmail.com github.com/vilinicz @vilinicz en/ru

Summary

Fullstack engineer with 8+ years building web apps.

I work across the stack, focusing on clean logic, smooth teamwork and product success. I thrive in distributed remote teams, enjoy solving tricky problems, and have led projects that scale smoothly for startups and established companies.

Achievements

Winner – Hackaging.ai International Longevity Hackathon (Singularis track)

2025 | hackaging.ai

Built an automated knowledge-graph pipeline that ingests scientific literature, extracts key entities and relations, and surfaces connected insights with provenance and confidence scores. Took first place award and started ongoing discussions with the organizers.

Experience

Ruby Engineer – Bravado

2025 | bravado.co | remote

Bravado connects top sales around the world.

Integrated multiple ATS systems for candidate import/export, update tracking.
Built notification workflows and data sync between external HR tools and Bravado pipelines.

Founding Developer – Waybe

2024 | remote

A small local startup helping taxi drivers generate waybills on the go - via web and Telegram.

Planned the product with user stories, built and deployed the app on Rails 7 with Kamal, Turbo and Stimulus, and added Telegram bot for one-tap waybill generation.

Fullstack Engineer – Truecare24

2021 – 2023 | truecare24.com | remote

US-based healthcare company connecting patients and providers.
Joined as the only Ruby dev to maintain and scale the core platform.

- Optimized backend code and database queries (up to 20x faster response time)
- Built Provider scoring system and new API v2 for core features
- Fixed Twilio voice and SMS integration problems
- Dockerized all services with SRE, making deployments predictable

Frontend Developer – MRTech

2021 | mr-technologies.com | remote

Created a Vue.js web application for video-camera setup in closed networks.

Responsive, initializable with JSON config, offline-ready frontend integrated with embedded system via custom API.

Fullstack Engineer – Localrent

2020 – 2021 | localrent.com | remote

Aggregator of local car-rental companies operating internationally.

Here I worked as Ruby on Rails and Vue.js developer, feature designer and team consultant:

- Built real-time partner API integration, expanding business to new countries
- Redesigned search logic: external and own cars loading, filtering and caching
- Rebuilt legacy booking model (~7 years old) into clean modular Interactors with CTO
- Developed additional car rental services, enabling customers to order extras easily
- Added Stripe, RBK, MoneyWall payments
- Introduced pair programming sessions, code-review culture, and documentation

Backend Ruby Developer – Realy.

2020 | realyapp.com | remote

Realy. - is a dating application, started by my friend with the goal to help all lonely people.

Prepared app for production:

- Migrated SQLite to Postgres, with backups and indexes
- Tuned up matching algorithm in the ElasticSearch
- Set up deployment to the DigitalOcean servers
- Fixed user profile and chat bugs in API endpoints used by mobile app

Team Lead/Fullstack Developer – Intellect Group

2017 – 2020 | hybrid

Led a distributed remote team (~8 devs), planned architecture, and coordinated clients and UX.

Launched ~12 internal services and MVPs - from a public WiFi auth portal to city transport dashboards

Earlier Work

2014 – 2017 | hybrid

Worked on startups like eduson.tv (ed-tech), Just Work Together (coworking marketplace) and several freelance projects.

Focused on frontend, data visualisation and internal tooling.

Skills

Backend: Ruby on Rails, PostgreSQL, MySQL, Redis, ElasticSearch, REST API, GraphQL, RSpec

Frontend: Javascript (Vue.js, Nuxt, Stimulus), WebSockets, UI/UX, Figma

Infra: Docker, CI/CD, GitHub, AWS, DigitalOcean, Kamal, SSH, Rollbar, New Relic

Workflow: Agile, user stories, decomposition, architecture, team facilitation

Additional: Python (Starlette, FastAPI, AsyncIO, SpaCy), AI tools (RAG, Pinecone, OpenAI API)
